# Fresh Air

Thanks to space-age technology, your home can keep inside in and outside out more efficiently than ever before. But locking the fresh air out is a bad idea.

A fresh air appliance by Fantech will allow you to bring it all in without sacrificing the energy your home worked so hard to produce.

# Give your home a new lease on life with a breath of fresh air

Fresh air doesn't come out of nowhere. It comes from outside, just out of reach. Your house, being sealed tight, is not naturally good at letting outside air in.

### Does your basement have **that** smell?

Basements tend to hold moisture and stale air particulates to create that signature smell. A fresh air appliance can introduce fresh air while also exporting undesirable smelly particles. Some solutions suggest simply removing air with an exhaust fan, but that would create a negative pressure that isn't optimal for air quality in your basement. With a Fresh Air Appliance, your home can keep the good air inside while kicking the bad air to the curb.

## Summer Fun Year Round

How to keep the summer breeze blowing no matter how cold.

An indoor pool has its perks, but your structure isn't used to keeping summer humidity all year. Especially when the windows are closed for the winter. A light commercial Fresh Air Appliance can be the perfect solution for keeping your indoor pool ventilated with fresh air while the nip of winter is at your door.

## Fresh Air that Never Ends

An infinity pool might let you swim forever, but the same can't be said about the air circulating. Water is the enemy in any building, so a pool needs special attention to protect the room surrounding it. Humidity is constantly evaporating from the pool and bogs down the air in your facility with excess humidity. A commercial heat recovery ventilator (HRV) can mitigate humidity while conserving energy.

**Buy This Package**

SHR 450 Fresh Air Appliance AND ECO-Touch<sup>®</sup> Wall Control AND BPM 08-14 Bypass Damper

## Your Hair Needs Fresh Air

Getting your hair done is supposed to be fun, not smelly

Keeping the lion's mane conditioned and clean takes a lot of work... and there are a few smelly chemicals that help push the hair in the opposite direction of gravity. Some of these odors can be obnoxious or unhealthy to breath all day long. The filters in the AC unit are not up to snuff when it comes to dealing with these smells.

A Fresh Air Appliance FIT 120 might be the perfect solution for getting rid of all the smells and excess noise that may disrupt the ambiance of your small business. Rather than recirculating these obnoxious fumes all day, fresh air is simply introduced to your space. Energy loss isn't a pressing issue either because of the energy transfer that occurs inside of the unit.

## A creative solution for her creative space

Keep the air and ideas coming FRESH all day long

Her creative get-away is only steps away from your house back door. Of course, a limited sized space like this requires smart solutions to keep the air fresh through the winters and summers. A ductless mini-split unit is a great way to keep this space temperature controlled. Due to its small size, the she shed needs ventilation.

A CM3000 can easily introduce fresh, filtered air and keep the inspiration coming.

In seasons when the weather is especially extreme, try pairing the CM unit with the FDT7 Timer to control supply air on demand..

# Filtration

You filter your water and wash your food because you understand the importance of purity in something so important to your day to day wellness.

You can live 2-3 days without water, but you can only live a few minutes without air. Shouldn't we treat air with even more respect?

- Whole House Filtration ..... 26
- Mini-split IAQ..... 28

## Beware of the Air!

Fantech's solution for the most valuable particle in your home.

Air is precious and easily contaminated by the everyday chemicals we use to cook, clean, and play in our homes. Let Fantech relieve some of the pressure with a HEPA filters scrub 99.9% of particles that pass through it! A variety of form factors and insulated options really leave you with no excuse not to install one of these affordable, whole-home filter options.

Consider the space when you are installing a filter box. Not every HVAC system is equally accessible and that's why Fantech offers a variety of mounting options to ensure you have the best possible installation.

### Mini-splits Shouldn't Divide Your IAQ

We can fill your **WHOLE** home with healthy, fresh air.

A single family home may be equipped with a ductless mini split heating/cooling unit in geographical areas where mild climates only require excessive air conditioning a few days a year, but that can fall short in a few ways.

Installation of multiple units to effectively condition air in individual bedrooms and living rooms may be required. This isolates the effectiveness of a mini-split to its immediate location. The conditioned air stays locally around the unit. In some homes, such solution might not be cost prohibitive. Regrettably, mini-splits are not up to ASHRAE 62.2 that define minimum filtration level that your home requires.

By equipping your home with a whole house filtration system CM3000, you can easily draw the air from the space conditioned by a Mini-split and distribute via a small duct system to other part of the home, ensuring a supply of clean air. The filtration unit is fitted with a three-stage filter to ensure your loved ones breathe the air free of pollutants

## A Step Above the Rest

Give you fresh air a leg up with this Riser Hood & MERV 8 Filter.

Legacy products like the VHR Series are a dependable and affordable fresh air appliance for your home, but a prefiltered solution like this will raise the bar even more.

Intake filters tend to risk being covered by outdoor debris like snow. But the design of the FML 6 allows your exhaust vent to stand higher above the ground level, allowing fresh air to enter in most circumstances.

# Kitchens

The magic really happens in the kitchen. This is where Grandma bakes her cookies, where Mom makes her lasagna, and where Timmy chows down with his soccer pals after practice. More and more, modern homes are turning their focus to the kitchen for entertainment rather than their flat screens.

Fantech offers a variety of solutions to help you create a quieter, healthier kitchen experience to be remembered for years to come.

- MUAS Wall Exhaust ..... 34
- MUAS Roof Exhaust ..... 36
- MUAS Community Kitchen ..... 38
- Food Prep Exhaust..... 40

## Your kitchen might be choking under the pressure

Does cooking a good meal take your breath away? Maybe it's not the steak, maybe it's your kitchen exhaust expelling all the good smells out of the kitchen.

Fantech's makeup air system automatically replenishes lost air as needed to ensure your kitchen is happy and full even when the master chef is busy at work.

## Does a loud range hood keep you from using your indoor voice?

Does your kitchen require less than 400 CFM? Smaller kitchens don't require a monolith of power to evacuate air on a regular basis. If this is the case for your multi-family or single-family project, consider a Fantech, remote mount kitchen exhaust solution.

A remote fan allows you to have a much quieter kitchen environment when you're running the range hood. In homes where entertaining in the kitchen is becoming more common place, this feature is sure to help keep your voice at an appropriate level all night long.

## When Your Lungs are Bigger than Your Stomach

The kitchen is the heart of the home. But in newer projects, community kitchens are becoming more and more prevalent outside of the residential dwellings. Even though these kitchens aren't inside a typical home, the people that gather here come to be together.

A large space like this might also require an exhaust system over 400 CFM. In this case, Fantech offers make up air solutions that replenish lost air without any unnecessarily loud exhaust or harsh smells. This is just one way Fantech brings people together.

## No More Crybaby Onions

Not all food prep happens on the stovetop where a powerful exhaust range hood is a must. Have you thought about adding a secondary exhaust solution to a food prep station? No more crybaby onions or smelly slow cookers.

A simple exhaust duct concealed in a wall or cabinet controls a plethora of food prep odors. The fan gets activated by pressing a 20 min timer and the fun begins! A secondary exhaust is a great premium feature for your next new construction or remode.

# Bathrooms

Designing a bath involves many decisions that will ultimately affect its look and function, whether it be a busy family bathroom or a small guest bath with limited space. Or, maybe, you're going all out for that ultra-modern bath retreat with all the amenities.

No matter what style bath you're designing, one thing remains the same - the need for proper ventilation.

# A premium bath is part of your guest's perfect Getaway

## Help Your Guest's Escape With a Little More Fresh Air

Part of being a hospitable host is keeping quiet during unreasonable times of the night. In a home where a single bathroom is adjacent to a guest bedroom, it might be beneficial to have a quiet bath fan nearby. Another part of being a hospitable host is looking good! Luckily our grilles are a simple and stylish addition to any modern bathroom. A 60-minute timer is a great way to simplify your guest's experience

### Does a noisy bath fan leave you steaming?

It's hard to relax in a hot bath when the buzz of your bathroom fan is all you can hear. Then, it is the time for peace and quiet with Fantech's remote-mounted bath fans for virtually zero noise heard from inside your bathroom.

### The Math is Simple Full Bath + 1/2 Bath

For a double bath you simply add the CFM requirements of two bathrooms and add them together.

$9' \times 13' = 117 \text{ sq ft } (>100 \text{ sq ft})$

1 toilet + 1 tub = **100 CFM**

$7' \times 8' = 56 \text{ sq ft } (<100 \text{ sq ft}) = \mathbf{56 \text{ CFM}}$

Add results from both.

$100 + 56 = \mathbf{156 \text{ CFM}}$

## This Mocha was brought to you by Fantech

This café needs fresh air in its powder rooms so customers aren't distracted by smells other than their freshly ground coffee. In a configurable commercial environment you also need flexibility.

A Fantech remote Bathroom Fan allows a contractor to centrally mount a fan while taking care of multiple inlets at once. But what's more, if your client calls you back to move or add an additional bathroom, you can easily move the inlets without hassling with extra electrical or the purchase of additional expensive hardware.

### Why PB110?

In most situations a PB110 is not suitable for a split bath. But because of the compact nature of this commercial space, you can easily implement this bath fan to meet your needs.

## Buy This Package

### INLINE doesn't mean INSIDE

Here is a creative example of how an exterior mount fan can be used in place of an inline fan. A public park or campground with washrooms still needs its air taken care of. The added benefit of an exterior mount fan is that you don't need to crawl into an attic space in the small, unconditioned washroom you are working in. Keep the installation simple by working from the outside!

# Residential Laundries

It used to make perfect sense to put a dryer on the outward facing wall of your house. But then homeowners got wise and wanted them closer to the bedrooms, where the dirty clothes are.

While a dryer fan is rated well enough to exhaust lint through a shorter duct length, the homeowner's tastes have changed. Let Fantech help you extend the viable duct length of over 100 feet with our inline and externally mounted solutions.

DEDPV-705 .....	58
RVF 4XL .....	60

## Only YOU can prevent dryer fires

Even though you probably clean the screen in your dryer out after every use, lint still manages to work its way out and builds up in the ductwork. It is highly flammable and the most likely culprit in a fire started by your dryer. While regular maintenance is still vital for a healthy length of duct, Fantech's dryer exhaust fans are designed to give an extra kick to the warm, moist air and lint trapped in the duct.

### Calculate Your Duct Runs\*

The DEDPV-705 fan is rated up to **130 feet** in duct length for dryer applications. In general, duct runs frequently exceed the 25 equivalent feet that many dryer manufacturers set as a standard maximum length. For every 90 degree elbow, add 5 additional feet of duct length and for 45 degree elbow add 2.5 feet. The paragraph below illustrates how the duct length can be calculated.

**For example:** If a 4" duct connection from a dryer to the roof vent is **65 linear feet** with **two** 90 degree elbows, then the total duct run is **75 feet**. As stated above, for every 90 degree elbow, 5 feet must be added to the total duct length. Fantech is well equipped to use a Dryer Exhaust Duct Power Ventilator meeting UL-705 Standard for this application.

### Calculate Your Duct Runs\*

The RVF 4XL fan is rated up to **110 feet** in duct length for dryer applications. In general, duct runs frequently exceed the 25 equivalent feet that many dryer manufacturers set as a standard maximum length. For every 90 degree elbow, add 5 additional feet of duct length and for 45 degree elbow add 2.5 feet. The paragraph below illustrates how the duct length can be calculated.

**For example:** If a 4" duct connection from a dryer to the roof vent is **53 linear feet** with **two** 90 degree elbows, then the total duct run is **63 feet**. As stated above, for every 90 degree elbow, 5 feet must be added to the total duct length. Fantech is well equipped to use an RVF 4XL for this application.

# Garages

Air quality in an attached or detached car garage matters because the space's two main purposes are for parking emission-releasing vehicles and storing items that can include hazardous materials.

Take a look what a simple inline fan installed on the exhaust wall can do to your well-being.

Wall Exhaust ..... 64  
Roof Exhaust..... 66

## Keep the air moving when your car is in park

Your garage is a home to a plethora of smells and liquids that you use all over your house. Not all of these smells are harmless though.

Attached garage air quality matters because the space's two main purposes are for parking emission-releasing vehicles and storing items that can include hazardous materials. Your attached garage is attached to your house; it naturally has an impact on the rest of your home's air quality and safety.

A mechanical exhaust solution will keep dangerous volatile organic compounds (VOC) and chemical fumes from making it into your home.

## If you can't go out, go up

Always exhaust away from the the people you're keeping safe

The purpose of exhausting fumes from your detached garage is to protect the health of you and your family.

So, if your garage is stuck between a rock and a hard place; in this case, a playground and a balcony window, you'll want to vent the air upwards, of course. Thus, ensuring your children are safe from the harmful fumes you are mitigating.

# Radon Mitigation

Radon comes from uranium in the soil. When it breaks down, uranium releases odorless, colorless, tasteless gas called radon. The gas becomes dangerous when it enters your home thru cracks in foundation, pipes, sumps and unfinished floors.

Learn more how you can protect your home and homes of those you care about.

Active Soil Depressurization..... 70  
Dilution Solution ..... 72

## Let Radon take the high road

Radon simply loves a great escape. While radon is a dangerous gas when left unattended, it actually doesn't want to be in your home at all.

A mitigation system simply creates a more appealing route for your unwanted guest to evacuate. The science is simple!

Radon Out

### Is your home radioactive?

Radon is an invisible, radioactive gas that has a tendency to build up under the foundation of your home. Unfortunately, being exposed to this radioactive isotope won't give you superpowers. Learn how Fantech can keep your home safe with the utmost accuracy with their industry-leading technology.

**Rn 4EC**  
High Flow and Suction Radon Fan

It may seem too good to be true, but you really can mitigate radon gas with one simple fan installation!

### What if a simple ASD system isn't the answer

Radon levels in certain regions or building styles can be hard to mitigate with a traditional Active Soil Depressurization (ASD) system.

A Fantech HRV or ERV can be an effective way to reduce radon levels, by providing slightly pressurized ventilation to the space while introducing fresh air and diluting the air inside the structure. In most cases, this reduces radon levels and raises overall Indoor Air Quality (IAQ).

#### How Fresh Air Appliance can dilute radon levels in your home.

1. Exhaust the radon contaminated air as close to the floor as possible. (Radon is 8x heavier than air)
2. Bring in fresh, outside air to dilute the air inside thus lowering radon levels.
3. Locate these grilles at opposite ends of space to create a cross ventilation strategy of dilution.
4. Slightly over balance the Supply Air side to achieve positive pressure in the space. (Positive pressure assists in keeping radon from seeping into the home)

### Buy This Package

# Back Bedroom

Does it sometimes feel like your back bedroom takes forever to get to the desired temperature after a long hot day? Extended duct run from the furnace, or air conditioner creates a lot of static pressure keeping the air from getting to upstairs or the back of your house. A simple inline fan can do the job of boosting the air on demand.

FG 4XL EC  
Inline Fan

### Ultra Versatile Inline Solutions

A FG 4XL EC can be whatever you need it to be. In this scenario, the contractor is using this fan to boost this extra long duct run to the back bedroom. Thus, ensuring the conditioned air makes it through its long journey in this large home. The airflow can be easily adjusted via a built-in potentiometer on demand. Do you have a unique application with this product's name on it?

**FG 4XL EC**  
Inline Fan

**FTD7**  
7 Day Timer

# Attic

Your attic is an unconditioned area, which means that it should be similar to the same temperature and humidity as the outside air. Proper ventilation helps you avoid issues like mold, rot ice damming and more.

### It's an attic, not a sauna.

Your attic space acts as a thermal buffer between your house and the outdoors. During much of the year, the ventilation in your attic automatically regulates itself thanks to natural differences in pressure. But in the hot climates or during the summertime it is possible for these pressures to even out and create stagnate air.
